

novavine

Our Sources

Diversity and collaboration

Novavine grows the vast majority of its scion and rootstock in its own increase blocks in Yolo County. We have partnered with a select group of nurseries to provide you the finest clones available. These outstanding collections are part of the **Novavine** catalog:

VCR—Vivai Cooperativi Rauscedo—the world's largest grapevine nursery, located in Friuli, Italy. VCR-selected clones of Italian and international varieties are recognized worldwide.

Herrick Grapevines—Outstanding collection of 100% California-certified clones sourced from the state's most recently planted increase block of this sought-after international material.

Tablas Creek—This renowned collection is the most comprehensive source of Southern Rhône varieties in the United States.

Family owned since 1996

Novavine is located just to the east of Santa Rosa in the beautiful Sonoma Valley. Our Sonoma facility includes 45,000 square feet of greenhouse space, the company offices and all of our production facilities. In Yolo County we have a 90 acre increase block producing grape scion and rootstock, and annually we grow a 100 acre field nursery. **Novavine** also grows olive trees. Our exceptional inventory of diverse olive varieties includes the special IRTA clonal selections for super-high-density production.

Offering you a choice

Green vines

Green vines offer rapid turnaround time from order to delivery. The active, vigorous growth of green vines gives excellent performance in suitable planting situations.

Quality

Novavine emphasizes California-certified grape scion and rootstock

We do everything we can to assure that our plant material is the finest and healthiest. We lease the land for our field nursery so that we can constantly rotate our plantings to avoid the buildup of pests and diseases. **Novavine** plants are grown in association with symbiotic mycorrhizae in a soil medium with a rich microbial food web so they develop exceptional roots, balanced growth and strong tissues. We use custom software to ensure traceability of every aspect of every vine back to its original source.

Dormant vines

Our **dormant vines** are mechanically planted and grown with drip irrigation. We use biological inputs to produce balanced plants of an optimal size, with vigorous, multi-branched root systems. We maintain inventories of bench grafts and rootstock rootings for those last minute planting decisions.

Novavine's grading standards are the most stringent in the industry, assuring you the highest quality grapevines!

Sustainability

A lifetime of sustainable practices starts in the nursery...

Combining large-scale commercial nursery production with a commitment to environmentally and socially responsible practices requires both creativity and innovation. **Novavine** has pioneered many non-chemical methods to establish, grow and protect plants using inputs such as compost teas, living substrates, and synergistic biologicals. Our commitment to a non-toxic workplace—one that safeguards air, water, soil, wildlife and health—is fundamental at **Novavine**, not an afterthought.

Our customers...

are our most important partners

At **Novavine** we believe in working in cooperation with nature and with growers. We value the lasting relationships we have with our customers, and believe in better viticulture through cooperation. Let us help you find the right clones for your situation, whether you are looking for the tried and true or something unique. **Novavine is a family-owned company** that is large enough to have excellent technology, but small enough to care!
